

Eclipse wont run without JAVA JDK.

On your cmd prompt just type **java -version (same command for windows/mac/ubuntu)** to find out whether java is installed or not. If java is installed on your machine then it must show the version of the java jdk, otherwise the command returns "command not found " error, in that case you have to install the java jdk.

installing Java for Windows and Mac is super easy and for ubuntu needs some settings.

The procedure is covered in the attached downloadable pdf files. go through it and follow the steps.

Let me know if you need any help.
